

**COMPOSITIONS AND METHODS FOR CONTROLLING THE
RELEASE OF CHEMICALS PLACED ON PARTICULATES**

Abstract of the Disclosure

[026] The present invention relates to methods and compositions for creating and using particulate materials having treating agents absorbed thereon and coated with a degradable coating material. One embodiment of a method of the present invention provides a method treating to a subterranean formation comprising placing a coated, treated particulate into a subterranean formation wherein the coated, treated particulate comprises a particulate material having a treating agent placed thereon and a substantially complete layer of a degradable coating material coated placed thereon over the treating agent.
